4.1. Sample Title ..... 6

---

This document offers a comprehensive preview of the templates used for Alan documentation, offering samples of how fonts, typography, AsciiDoc elements, custom styles and syntax highlighting will be rendered and styled in the final documentation, allowing to compare quality and differences across all the supported output formats.

Some contents are format dependent and will vary according to the document's output format and the backend employed, providing additional information specific to that format and/or backend.

| This document is still under construction.

  - a. Alii missing oculis aliorum sicut serpere crabs nostram.
    - i. Putridi braindead odores kill and infect, aere implant left four dead.

## 2.3. Checklist

- ☐ Unchecked item.
- ✓ Checked item.
- ✓ Checked item.
- ☐ Unchecked item.
- ✓ Checked item.

The characters used to represent the check boxes can't be controlled via XSL stylesheets, for this is not a DocBook feature but an Asciidoctor feature. During the conversion to DocBook, Asciidoctor converts checklists to unordered lists without bullets, and injects the checkbox character before the list item:

\* `&#10063;` (unchecked box)

\* `&#10003;` (checked box)

Therefore, for the FOP converter these are just list items without bullets, and the checkboxes are just part of the list entry contents.
